Art Unit: 1635

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 94-111, 113, 121, 122-126, and 155-164, drawn to a method of modifying a target RNA in a cell via an oligomeric compound, classified in class 514, subclass 44.
- II. Claim 112, drawn to a cleavage product, classified in class 536, subclass 23.1.
- III. Claims 114-119, drawn to a method of forming a double stranded RNA, classified in class 435, subclass 6.
- IV. Claims 120, drawn to a double stranded RNA made by a method, classified in class 536, subclass 23.1.
- V. Claims 127-150, drawn to an oligomeric compound, classified in class536, subclass 24.1.
- VI. Claims 151-154, drawn to an assay devise or kit, classified in class 435, subclass 283.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are different methods that utilize different methods steps that lead to materially different ends. One method ends in the

Art Unit: 1635

modification of a target sequence and one ends in the creation of a double stranded RNA.

Page 3

Inventions (I and III) and (II and IV and V and VI) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806,05(h)). In the instant case the compounds of Groups II, IV, and VI could be made by a different method than that of Group III as by using non-modified RNAs, for example. The method of group I could be accomplished by mutating the gene sequence of a target gene, for example. The composition of Group VI could be used in a different method such as a screening method, for example.

Inventions II, IV, V, and VI are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions different in function and modes of operation, for example. The invention of group VI functions to identify as by detection while the invention of group V is to inhibit a target RNA and the compound of group II is a cleavage product with no clear function as well as the RNA made by a method as disclosed for group IV, for example.

Art Unit: 1635

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention: The method of the invention includes the use of oligomeric compound with various modifications as recited in claims 155-164.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

Art Unit: 1635

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sean R McGarry whose telephone number is (571) 272-0761. The examiner can normally be reached on M-Th (6:00-4:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John LeGuyader can be reached on (571) 272-0760. The fax phone
